

Advanced-3

FIRE FIGHTER - OIL INDUSTRY - CHEMICAL INDUSTRY

CHEMICAL AND FOSSIL FIRE SUPPRESSION

NEUTRALIZATION AND DECONTAMINATION

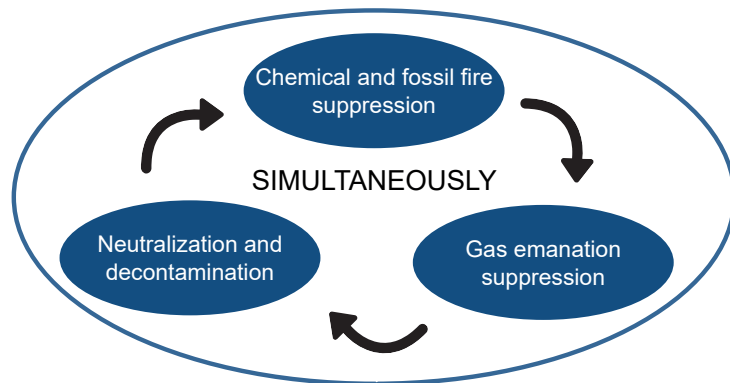

GAS EMANATION SUPPRESSION

Advanced-3 is a chemical fire suppressant for indoor and outdoor use. It is specially formulated to suppress chemical and fossil fires. It neutralizes contaminants and prevents flammable gas from catching on fire.

Advanced-3 applied with a conventional compressed air extinguisher, produces a foam capable of extinguishing chemicals fires. The foam is dense and stable, even on vertical surfaces. It has shown a high adherence and viscosity to porous and non-porous surfaces.

- Extinguishes chemical fires
- Sticks to vertical surfaces
- Prevents toxic and flammable gas from catching on fire
- Decontaminates agents
- Restrains pollutant spills

3 in 1 SOLUTION

- Advanced-3 reacts to chemicals it is in contact with and neutralizes them. It is a non toxic decontaminant.
- Advanced-3 has the ability to trap the gas/vapors produced by methanol (alcohol) and ammonia. The foam inhibits the methanol flammable vapors and trap ammonia vapors.
- Advanced-3 foam can be applied for spill containment and remediation. It is compact, dense, viscous and stable. It does not allow the passage of toxic volatile thus preventing any risk of gas fire.

Advanced Decon Technologies is a privately owned company manufacturing the future of non-toxic biodegradable chemical products.

Advanced Decon Technologies provides turnkey answers to pathogen-generated biological and chemical threats.
